**At the foot of Popocatepetl** (Smoking Mountain) is a volcano about 40 miles from Mexico, from which city its snow-lad summit is always a prominent feature on the south-eastern horizon. It is one of the loftiest peaks of the Corvillera. It rises to a height of 17,784 feet, and possesses a crater three-quarters of a mile across and nearly 1,000 feet deep. There has been no eruption here since 1640, but sulphur and smoke still testify to its latent activity.
